- ✓ we lacquer in the full RAL K7 colour palette and, on request, in other colours (use powder code)

1.06

Ud for Ug = 0.5 (the Ultimate frame)*

Unico XS steel doors open inwards or outwards, significantly increasing their functionality. They are equipped with stainless steel thermal breaks, which stabilise the already rigid structure. They can be filled with panels from the extensive aluline collection or use warm glazing with insulating glass units up to 42 mm wide.

The Unico XS system offers solutions that are useful and aesthetically pleasing at the same time. It has welded hinges with up/down adjustment. All welds are filed and polished. The galvanised steel profiles are powder-coated. The door is suitable for contemporary and traditional architecture.

The EDPM two-component synthetic rubber double gaskets make the **doors** stand out among competing offers. They are a durable solution, guaranteeing long-term use while maintaining good thermal parameters.

Unico XS doors offer single and multi-point locks. They are available with a threshold and in the HI option.

*The Ud value is given for an 1100 x 2100 mm door with a threshold.
